ROSSI™

Return On SAS® Software Investment

Designed For

Medium to large enterprises

Data rich companies that want to tap into the mass of big data they already have in different data bases.

Enterprises short of SAS® resources with the newest skills needed to predictively analyze data for insights providing a competitive advantage.

Maximizing architecture strategies and processes with IT infrastructure and the use of SAS® software

ROSSI™ Benefits

Gives you confidence that your technology investment is providing the maximum expected return.

Solves real problems, not a scripted training session

Utilizes the licensed SAS® tools at your site

Hands-on knowledge transfer of advanced programming techniques

Rapid development and deployment of the solution involving key SAS® products

Identify trends and patterns for more high-value decisions

Affordable

Depending on your budget, we can provide a fixed cost or time and materials engagement. Either arrangement can be on-site or remote.

Solution Design's **ROSSI™** service helps you quickly unlock the power of SAS® Analytics in your organization. Working side-by-side with your team on a prioritized project of your choosing, we rapidly ramp up your team's SAS® skills by tackling real-life business problems. The overall goal is to effectively enhance the utilization of SAS® and improve the competitiveness of your enterprise.

Solution Design understands that every client is unique and we pride ourselves on delivering the right solution with the best possible value for your business. We've used SAS® for over 30 years and are ready to help your company maximize its investment in your SAS® software. Our workforce is trained on SAS® products and will quickly show you how to optimize your licensed SAS® solutions.

Got an Analytics Visualization Challenge?

Contact us today for additional information!

Design Your Project From One or More of These ROSSI™ Choices

- Reading SAS® data with the Add In for Microsoft Office in Excel & PowerPoint
- Using SAS® Data Management—ETL and Data Cleansing
- Administrating SAS® Management Console Metadata, Data Access, SAS® servers, Users, Groups, libraries & security plans
- Building Enterprise Miner Scoring Models
